

You know him.

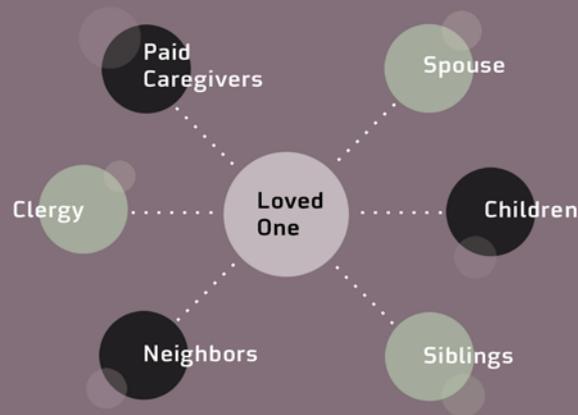

Know he's okay.

Be CloseBy.

Keep your loved one home longer with CloseBy Network™.

There's no place like home for elderly loved ones, but caring for them can take its toll. Now you can share the load between siblings, children, neighbors and other caregivers with CloseBy Network™. For less than the cost of one month in an assisted living facility, you can install CloseBy Network and monitor your loved one's activities in the home with messages sent by emails, texts, or the Internet.

Q What is CloseBy Network?

It's a network of wireless sensors installed in the home and tied to a web application to create a secure "care network" of family members, caregivers and neighbors. The system consists of a base station and multiple motion/occupancy sensors and other sensors which monitor and report activity in the loved one's home. It notifies specified people in your care network when there are problems or changes in

"CloseBy has been a lifesaver. I can leave the house with a sense of confidence, knowing what's going on."

normal behavior. It also allows you to simply check-in and see if your loved one is getting in and out of bed as expected, opening the refrigerator to eat, taking his or her medications, or leaving the house. CloseBy Network lets the elderly continue to live safely and independently in the comfort of their own homes. And it gives caregivers peace of mind, whether they are across the street or across the country.

Q What are the benefits to the caregivers?

CloseBy Network reduces the burden of caring for an elderly loved one in their own home and distributes the responsibilities among all caregivers. Balancing the care needs of a loved one living independently at home with your own family and personal responsibilities is what

CloseBy Network is all about. And it saves money by keeping loved ones in their own homes longer, instead of in an expensive assisted living facility.

Q Does my loved one need to learn anything new?

No. CloseBy Network is unobtrusive and almost invisible to your loved one. Caregivers on the network just need to have access to email, the internet, or have text messaging on their cell phones.

Q How does it work?

You choose how to create your care network by deciding what to monitor and who to include. You'll also need to determine how caregivers will receive notifications (text message, email or by a secure internet site). Once your care network is up and running, those people allowed access will receive alerts about your loved one's activity, and be able to check reports on the Internet. Changes in normal patterns may indicate a problem and prompt a call or visit.

Q What information can I expect to receive?

CloseBy Network allows you to choose what to monitor and how to receive reports. Depending on where you place the sensors, you can be notified when your loved one leaves and returns, gets out of bed, opens the refrigerator or medicine cabinet, and if he is moving normally about the house. You can also receive an alert if there is no activity within a specified time, or if your loved one pushes the "contact me" button for help.

Q What are the benefits to my loved one?

Many! He can continue to live safely, independently, and comfortably in his own home, and not feel like a

burden to anyone. Plus, it saves the emotional upheaval of a move to an assisted living facility, or into a family member's home. Without any disruption to his routine, your loved one will be comforted knowing that help is close by.

Q What if I don't want everyone in the care network to have all the information?

You choose who receives which information. For example, you may decide to have a neighbor only receive an alert if your loved one has opened the back door. Or skip the alerts to family members living out of state, but give them access to information through the Internet or email reports.

Q What if I go on vacation and don't want to receive alerts?

You can set notifications to go to another caregiver while you are gone, and then take the responsibility back when you return.

Q How much is it?

The cost of CloseBy Network varies, depending on what you want to monitor. However, it's a fraction of the cost of just one month in an assisted living facility.
